Experience

Software Engineer — Freelance Software Development *Jan 2026 – Present*

- Architected scalable backend workflows for a property-tech CRM, automating lead-generation pipelines and reducing manual processing by 70%.
- Developed and maintained RESTful APIs and scalable CRUD architecture for lead and contact management, supporting 10,000+ active records with sub-200ms average response times.
- Optimized API performance by 40% via scheduled caching and efficient upsert-based database synchronization.
- Engineered a production-grade softphone module with call lifecycle management, backend event integration, and real-time state tracking, extended into full call infrastructure covering automated disposition workflows, asynchronous processing, and lead/campaign synchronization, improving operational efficiency by 35%.
- Engineered an end-to-end Power Dialer that automatically initiates campaign calls, manages call states and dispositions, and advances to the next eligible lead without manual intervention, increasing agent talk-time efficiency by 50%.
- Built an AI Call Training platform with configurable personas and training scenarios, enabling trainees to practice real-world conversations and receive automated post-call evaluation using OpenAI models, cutting onboarding/training time by 30%.
- Implemented real-time AI voice and SMS agents for inbound and outbound lead engagement, using low-latency real-time models to maintain conversational context and respond dynamically, improving lead response time by 60%.
- Refactored time-intensive operations into asynchronous background jobs, increasing throughput by 45%; strengthened data integrity with optimized indexing and transactional patterns, cutting inconsistencies by 60%.

Full Stack Developer — Cloudnexus *Dec 2024 – Oct 2025*

- Spearheaded end-to-end development of Jobra AI, an ML-powered Applicant Tracking System, improving applicant-matching accuracy by 45% and cutting recruiter screening time by 60%.
- Collaborated with Anthropic on LLM improvement projects, including Claude Code: refactored GitHub repositories and integrated human-in-the-loop feedback to improve model performance and interpretability.
- Designed and delivered a Threat Management System with 2FA, RBAC, Excel data ingestion, and dynamic visualization using React.js, Redux Toolkit, Node.js, and MongoDB; optimized data flow and rendering performance, achieving 40% faster processing.
- Applied prompt engineering to streamline AI-assisted development workflows, accelerating delivery by 30%.

Projects

Property Voice AI *Sept 2026*

React.js, Node.js, Express.js, Socket.IO, OpenAI GPT-4o, Web Speech API

- Built a real-time voice negotiation trainer where users practice closing a real-estate deal against David, an emotionally adaptive AI seller persona powered by OpenAI GPT-4o.
- Implemented GPT-4o token streaming over Socket.IO with sentence-level TTS playback, plus barge-in via AbortController and voice-activity detection so user speech instantly cancels the active stream and audio.
- Designed an emotion state machine (5 seller moods) that adapts tone turn by turn, and a 5-dimension scoring engine (persuasion, clarity, objections, closing, engagement) for actionable post-call feedback.
- Added resilience: mock-AI fallback on OpenAI errors, browser TTS fallback, and incomplete-utterance handling.

PDF-Chat Application *May 2024*

FastAPI, LangChain, React.js, PostgreSQL, Google Drive

- Engineered a full-stack PDF chat application using FastAPI, React.js, PostgreSQL, and the Google Drive API, enabling conversational document querying.
- Integrated LangChain for NLP processing, achieving an 85% response relevance rate.
- Leveraged FastAPI's asynchronous capabilities to reduce API response times by 50%.
- Implemented secure storage via Google Drive API, supporting 50MB documents with 99.9% data integrity.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C/C++, HTML/CSS
AI / GenAI: LangChain, LangGraph, RAG, AI Agents, Tool/Function Calling, MCP, Prompt Engineering, LLM Evaluation
Backend: FastAPI, Node.js, Express.js, Nest.js, RESTful APIs, WebSockets (Socket.io), Async Processing, RBAC
Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS
Data & DevOps: PostgreSQL, MongoDB, MySQL, Docker, Git, CI/CD, AWS

Education

Oriental Institute of Science and Technology *Jul 2020 – Jun 2024*
Bachelor of Technology in Computer Science (AIML), CGPA: 7.9/10

Additional

- **Certifications:** C++ Specialization (Coursera); DBMS Essentials (Coursera); Programming Essentials in Python (OpenEDG).
- **Internship:** Full Stack Developer Intern, Stackmentalist — launched the company website (Next.js, Next-Intl, Tailwind CSS) and built RESTful APIs for a CRM system, documented with Swagger.
